

Aerial Lift Train the Trainer Avondale

Aerial Lift Train the Trainer Avondale - The Aerial Lifts Train the Trainer Certification Program would teach trainers how to efficiently train operators in safe industrial mobile equipment operation. Trainers are provided with in-depth instruction about aerial lift machinery. The program is offered on an open enrollment basis and delivered at selected training places. Prior to certification, trainers are evaluated and scored based on their understanding and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the top training provider in the business, we provide top notch hands-on training. We give a lot of opportunities to practice the techniques and concepts which are taught within the classroom. Together with hands-on experience, trainers develop general understanding of machinery theory and instructional techniques, classroom and field communication skills, and ability to effectively train and evaluate operators. Trainers would gain knowledge of what traits make a successful trainer.

The Aerial Lifts Train the Trainer Program also teaches the correct methods required to be able to express the right information within the classroom and field setting. There are three factors of machine operation which the trainer should learn how to convey to operators: what to perform; how to do it; and the reason why it needs to be carried out.

The program offers detailed, up-to-date reference material to be able to help trainers convey the subject matter to equipment operators. Instruction manuals contain detailed information on all aspects of industrial mobile equipment operator training. Incorporated within the package are training aids which provide a visual reference to be able to enhance the learning experience. The equipment-specific training products contain necessary materials meant for both the trainer and the operator: overhead transparencies, videos/DVD's, safety message posters, kinds of equipment; digital training aids and stability pyramid.
